Malaysia: piracy

Abraham of Shearn Delamore & Co outlines the legislative and policy changes it has made and assesses their success Legislative changes boost IP

The Malaysian government has taken steps to rid the country of its reputation as a haven for piracy. Karen

# enforcement n the first quarter of this year, the International **Profile:** Karen Abraham Maritime Bureau (IMB) reported an increase in the Karen Abraham is an advocate and solicitor of

waters. The article was referring to piracy in the traditional sense of violence against seafarers and hijackings, and not as we know it in the IP field. Yet it seems that piracy in the IP world has been a strong feature in the region. Optical media piracy has been on the rise globally and Malaysia features prominently as being in the centre of this worldwide network. In 2000 and 2001,

number of attacks in 'piracy-prone' south-east Asian

Why trade mark mediation is taking off

Malaysia was placed on the US government's Priority Watch List largely due to the rising numbers of optical discs being produced, sold and exported from Malaysia. The Malaysian government did not take this lightly and took steps to strengthen regulation, enforcement and education. Regulation The Optical Discs Act The Optical Discs Act 2000 was one of the legislative initia-

tives taken to combat the prevailing problem of piracy in Malaysia by imposing a licensing regime on all manufacturers of optical discs. One of the measures it introduced to control the spread of optical disc piracy was the compulsory marking of codes on all optical discs. However, the Malaysian government soon found itself battling on new fronts when it discovered that pirates were circumventing the law by deleting these codes from the CDs they produced in order to avoid detection. The government has had to procure state of the art forensic equipment to counter these sophisticated tactics. At present, licensed optical discs manufacturers are classified into three categories: pre-recorded replication, CDrecordable/DVD-recordable replication and mastering sys-

tem. Lists of the licensed optical disc manufacturers are readily available at the Enforcement Division of the Ministry of Domestic Trade & Consumer Affairs (MDTCA). At present, the government has frozen the issue of new licences. Sponsored editorial

Inter-Pacific Bar Association. She advises on all allied IP rights such as food and drugs, agency franchising, merchandising, commercial sales contracts, sponsorship, advertising and all aspects of e-commerce and telecommunications-related causes and cyberlaws. She was recently made an honorary fellow of the Association of Fellows and Legal Scholars of the Center for International Legal Studies, Salzburg, Austria. The author wishes to acknowledge the assistance of Pauline Khor and Janet Toh in the writing of this article. Pauline Khor is a registered trade mark and industrial design agent and an advocate and solicitor of the High Court of Malaya. She is a partner and her practice includes

IP litigation and e-commerce. Janet Toh was admitted as an advocate and solicitor of the High Court of Malaya in 2002. Her work encompasses prosecuting trade mark applications, drafting agreements and licences related to IP and IT including e-commerce related documentation, and advising clients on consumer laws and regulations. Anti-counterfeiting labels (holograms) – regulating the product The Trade Descriptions (Original Label) Order 2002, which came into force on January 15 2003 was another attempt to address the problems arising from the ever increasing levels of piracy and counterfeit activities found in movies, music, games software and audio recording industries. Under the

Order, all optical disc products are required to carry "origi-

nal label" holograms (anti-counterfeiting labels) inside the shrink-wrap of all copies of works distributed in Malaysia (whether manufactured locally or abroad). These holograms www.managingip.com Malaysia Special Focus

on the rise globally and Malaysia features prominently

# as being in the centre of this are intended to assist the consumer to distinguish between original and pirated products.

Optical media piracy has been

uously on the goods concerned. The cost of an original label between the period of January 15 2003 to July 14 2003 was fixed at 10 cents

The applicant (the copyright owner, his licensee or an

authorized person) is required to affix these labels conspic-

(\$0.03) and after July 14 2003 was increased to 20 cents. Individuals found to have contravened this legislation face fines of up to RM100,000 (\$27,000) or three years in jail.

Up to December 31 2003, the Enforcement Division had received 3487 applications from 1,649 copyright owners and sold 62,168,219 labels valued at RM7,966,402.30 (\$2,096,421).

Price control on DVDs, VCDs & CDs - regulating the prices

In 2003, the government proposed a controversial and unprecedented method in a further attempt to control the

piracy problem: optical discs and computer software were

categorised as price-controlled items under the Price Control Act 1946. This proposal was met with much resistance and criticism from across the relevant industry sectors. After months of negotiating with the government, the proposal was confined to implementing a ceiling price on Case data and value of seizures (in ringgits) for imitation goods under the Trade Descriptions Act 1972 (From January 1 2000 to December 31 2003)

Force works closely with other governmental agencies such as the police, National Film Development Corporation, the Customs and the Ministry of Health to further enhance its enforcement programmes. Pirates in Malaysia, however, have also kept pace and have devised methods to avoid detection. Becoming increasingly agile and mobile, the pirate syndicates are able to cross borders, camouflage and transform their trade.

The most effective way of fighting piracy is therefore

through inter-governmental and cross-border cooperation.

To this end, IP owners can expect more cooperation

between the MDTCA's enforcement division and Customs in commencing a border measure programme to ensure enforcement at Malaysia's gateway. The Malaysian Customs and the MDTCA are already cooperating with **Becoming increasingly** agile and mobile, the pirate syndicates are able to cross borders, camouflage and

identified as selling/distributing/using infringing copies of computer software and sound recordings. Change in strategy Malaysia's determined efforts to eliminate piracy have been well received internationally. The visibility of pirated goods in Malaysia has been reduced and piracy is less rampant than before. Statistics however now reveal that these products are now reaching international shores thereby raising the new issue as to whether exports should be regulated. Should Malaysia be compelled to do this when this is not practised elsewhere?
